

# Router DP2100

The new depaneling Router DP2100 is packed with even more features! Running on Windows™ with icons it easy to operate. The upgraded software prompts the operator when the vacuum bag is full or when there is an error. A hand held consoles allows for fast/slow movements of the table and facilitates for easy teaching.

All doors and panels are interlocked and together with the front curtain sensors stop the operation when activated and resumes from its last stop position when cleared.

The vacuum pump together with the filter system is housed within the machine.

A separate vacuum hose allows the operator to use it as a vacuum cleaner during maintenance. All slides and leadscrews are protected against the abrasive dust by covers and bellows

With two independent worktables it increases production efficiency and throughput, by allowing the loading/unloading of PCB panels from one worktable while the PCB panel on the other worktable is being depaneled. Its most unique feature is the ability of the router to run two different routing programs simultaneously on different worktable.
